

READING COMPREHENSION

1 of 142

Coal is the most widely available fossil fuel resource and forms the backbone of world's electricity supply. Coal is the key component in production of iron, steel and cement which is a vital material in building sustainable societies. Consumption of coal is high in the power industry. In terms of types, coal can be segmented into lignite, sub-bituminous, bituminous and anthracite. It is employed in various sectors such as power, iron and cement. Consumption of coal is one of the important economic indicators to gauge the growth potential of any region. Challenge of energy poverty and global warming issues is the main driver for investments in clean coal technology. National, international and financing policies must support usage of the most efficient and cleanest coal technology.

The high-level analysis in the report provides detailed insights into the coal trading business globally. There are currently numerous drivers of the market. One of the most prominent drivers is the rise in power sector. Market attractiveness analysis was carried out for the coal trading market on the basis of geography. Market attractiveness was estimated on the basis of common parameters that directly impact the market in different regions.

Transportation cost plays a vital role in determining the final price of coal traded in the market. It constitutes a huge share of the total price of the coal. Demand for coal would be dependent on its price in the international market.

Rise in industrial development in Asia Pacific is a major driver for the coal trading market in the region. North America was the second-largest market for coal trading in 2014. The market in North America and Rest of the World experienced sluggish growth in the year. However, growth in infrastructure activities is anticipated to boost market growth in these regions in the near future. China and India are likely to emerge as high potential markets for coal trading in Asia Pacific.

What is the main idea of this passage?
Consumption of coal in various industries.
Clean coal technology
Market for coal consumption
Analysis of coal technology.
